BUSINESS PROPOSAL

Development of Online Car Importers & Dealers Portal

Prepared by: Tech Five Ethiopia IT Solution P.L.C

1. Executive Summary

Tech Five Ethiopia IT Solution P.L.C proposes the design and development of a centralized online portal that connects car importers and dealers with customers in one digital marketplace.

The platform will function as a virtual car market where importers can list available vehicles by model, color, specifications…etc, allowing customers to browse, compare, and connect directly with sellers.

2. Project Overview

The proposed portal aims to:

- Digitize the car importing and dealership marketplace
- Increase visibility for car importers
- Provide customers with a convenient way to explore available vehicles
- Create a structured and searchable vehicle listing system
- Reduce reliance on informal communication channels

This platform will serve as a trusted and organized virtual automotive marketplace.

3. Key Features of the Portal

A. For Customers

- Advanced search and filter (by model, color, year, etc.)
- Detailed vehicle profile page
- Direct contact option with importer/dealer
- Mobile-friendly interface
- Clean and easy navigation

B. Admin Panel(Dealer)

- Manage users (importers and dealers)
- Approve or remove listings
- Monitor platform activity
- Basic analytics dashboard
- Content management
- Dashboard to manage listings
- Upload car details (model, color, year, engine type, transmission, etc.)
- Multiple image uploads per vehicle
- Edit, update, or remove listings
- View customer inquiries

4. Technical Approach

The system will be built using modern and scalable technologies to ensure performance, security, and future expansion capability.

- **Frontend:** Responsive and user-friendly web interface
- **Backend:** Secure server-side architecture
- **Database:** Structured vehicle and user data management
- **Security:** Role-based access control and secure authentication

The platform will be optimized for both desktop and mobile use.

5. Project Timeline (2 Months)

6. Payment Terms

Total Project Cost: 130,000 ETB including VAT

Payment Structure:

- 50% (65,000 ETB) – Upon agreement and project initiation
- 50% (65,000 ETB) – Upon completion and before deployment

This cost covers full development, system setup, and deployment.

7. Value to the Client

By implementing this portal, the client will:

- Establish a structured digital car marketplace
- Attract more customers through online visibility
- Offer organized listings instead of fragmented sales methods
- Create long-term scalable business opportunities
- Position themselves as a modern automotive marketplace leader

8. Conclusion

Tech Five Ethiopia IT Solution P.L.C is committed to delivering a professional, reliable, and scalable car importers and dealers portal within the agreed timeline of two months.

We look forward to building this digital automotive marketplace and contributing to your long-term business success.
